

Warehouse development

After experiencing rapid growth over the past several years, Herrco Cosmetics are keen to build on our existing facilities, and we have an ongoing policy of promoting and consolidating our growth. Having recently completed the building of a new double-storey warehouse on our site, this will enable us to expedite our production by receiving all raw material deliveries on site.

We will also hold some stocks of packaging componentry on site, in addition to our satellite warehouse. Existing customers will be aware that we have had a satellite warehouse partnership for several years where we store excess stock and packaging componentry. This is also an ideal solution for Herrco customers who wish to work with us on a free issue basis, meaning clients can store excess packaging componentry in a location close to us, and benefit from a free transfer as Herrco arrange daily transfers of stock.

In relation to our large on-site warehouse, this most recent expansion will guarantee Herrco Cosmetics is able to enter the next decade able to offer our customers an even better and streamlined service. We are committed to our mission statement of being an innovative and creative R&D facility, supported by professional manufacturing facilities- of which our new warehouses are an integral part.
